ABSTRACT

In 1989, a study was conducted at Prince George's Community College (PGCC) to determine the percentage of students enrolled in courses in the fall term who received passing grades, and to examine these pass rates for each course, academic discipline, and division. The study also examined student pass rates by gender, age, race, and admission status. Study findings included the following: (1) the collegewide course pass rate in fall 1988 was 73%, matching the record high achieved in 1987; (2) as a group, students did better in occupational courses than in general education or remedial studies; (3) pass rates varied greatly according to discipline, with 17 disciplines registering more than 10% above the college average; (4) the disciplines with the highest pass rates were radiography (100%), education (94%), health (89%), and nursing (89%): (5) the disciplines with the lowest pass rates were mathematics (52%), chemistry (55%), college learning skills (62%), and developmental mathematics (63%); (6) the health technology and nursing divisions had consistently high pass rates from 1984 to 1989; and (7) in general, women had higher pass rates than men, whites had higher pass rates than blacks and other minorities, students over 25 years of ago had higher rates than students under 25, and continuing students had higher rates than first-time students. COURSE PASS RATES IN FALL 1988 Enrollment Analysis Report EA89-6 April 1989

Introduction

This report summarizes course completion or pass rate information for the fall 1988 semester. Course pass rate analysis is one of three major approaches used at Prince George's Community College to systematically evaluate student academic progress. The three approaches are:

- 1. Course Pass Rates: Analysis of the percentage of initial course enrollees who successfully complete courses.
- 2. Term-to-term Retention: Analysis of the percentage of students enrolled in a given term who return for classes the following term.
- 3. Retention through Program Completion: Analysis of the percentage of degree-seeking students who graduate or successfully transfer within a given time period.

This report presents course pass rate highlights from the fall 1988 analysis. Student performance in individual courses constitutes a fundamental learning outcome, as assessed by the faculty. Examination of student outcomes at the course level is especially appropriate at community colleges, since as many as half the students enrolled in credit classes may have no intention of earning a degree.

Methodology

Course pass rates are calculated from final grade distributions. The pass rate represents the percentage of initial course enrollees receiving passing grades, including D and TP (toward passing) grades. The more failures and withdrawals, the lower the pass rate. Pass rates are calculated for each course, discipline, department, and division, and analyzed by student gender, age, race, and admission status. The findings at higher levels of aggregation are included in this report; supplemental reports are being issued concurrently that provide detailed data for each division.

Most Recent Outcomes: Fall 1988 Pass Rates by Discipline

The collegewide course pass rate in fall 1988 was 73 percent, matching the record high achieved in fall 1987. Fall semesters over the 1977-86 period recorded pass rates of 71 or 72 percent. Students as a group did better in occupational courses (77 percent passing) than in general education (73 percent) or remedial studies (66 percent). Pass rates varied greatly by discipline. Seventeen disciplines had fall 1988 pass rates more than 10 percentage points above the collegewide average:

Disciplines with High Pass Rates, Fall 1988

1.	Radiography	100%
2.	Education	94%
3.	Health	89%
4.	Medical Isotope Technology	89%
5.	Nursing	888
6.	Physical Education	87%
7.	English as a Foreign Language	87%
8.	Business	86%
٩.	Early Childhood Education	86%
10.	Respiratory Therapy	85%
11.		85%
12.	Literature	85%
13.		84%
14.	Criminal Justice Technology	
-	Health Education	84%
		84%
	Paralegal Studies	84%
17.	TV, Radio, and Film	84%

All six of the disciplines in the Health Technology division had pass rates more than 10 percentage points above the collegewide average. No social science, natural science, mathematics, or computer/engineering technology discipline was in this high-pass-rate group.

Four disciplines in fall 1988 had course pass rates more than 10 percentage points below the collegewide average:

Disciplines with Low Pass Rates, Fall 1988

	Mathematics	52%
2.	Chemistry	55%
3.	College Learning Skills	62%
	Developmental Mathematics	63%

As in prior years, it is clear that a substantial proportion of students coming to the community college are seriously deficient in mathematics.

Divisional Course Pass Rate Trends, Fall 1984-88

Courses in nursing and allied health have consistently had above-average pass rates, a finding reflected in divisional averages: Health Technology remains the division with the highest course completion rate:

Fall Course Pass Rates by Division

	<u>1984</u>	1985	1986	1987	1988
Health Technology Physical/Health Education Humanities Business and Management Social Sciences Computer/Engineering Tech. English Studies Science and Mathematics	86% 82 78 71 74 69 67	88% 86 79 75 72 71 67	90% 85 79 76 74 72 68 60	91% 83 79 77 75 76 71	89% 87 81 77 74 73 72
	-	01	00	04	59

During this period, course pass rates (including "toward passing") in remedial coursework ranged between 63 and 66 percent.

Fall Course Pass Rates by Demographic Group

Pass rates were analyze by several variables on the student information system. Similar analyses had been completed in 1981, 1985, and 1987. The aggregate findings for all four study periods are presented below:

Course Pass Rates, Demographic Groups, Fall 1981-85-87-88

	<u>1981</u>	1985	1987	1988
Women	7 4 %	75 %	76 %	76%
Men	68	68	69	70
Under 21	71 %	69 %	70%	71 %
21 - 25	68	69	73	71
Over 25	75	78	80	79
Black	65 %	66 8	69%	68%
White	76	76	77	78
Other	72	70	7 4	72
First-time	69 %	67%	68%	69 %
Continuing	73	7 4	76	75

Women, students over age 25, whites, and continuing students consistently achieved group course pass rates above the college average. Men, students less than 26 years of age, blacks, and first-time college students achieved group course pass rates below the college average. Detailed tables displaying pass rates by each variable and for each discipline are appended.

Subgroup Analysis

To learn which groups had the most difficulty completing courses, a four-way crosstabulation of the gender, age, race, and admission status variables was performed, generating 36 student subgroups. Five of the 36 subgroups had pass rates more than 10 percentage points below the collegewide rate of 73 percent:

Student Subgroups with Low Course Pass Rates, Fall 1988

1.	First-time	black	males 21-25	61%
2.	First-time	black	males under 21	61
З.	Continuing	black	males under 21	61
4.	First-time	black	females under 21	62
5.	Continuing	other	males 21-25	62

To provide associate deans and department chairpersons with detailed pass rate information in their areas, five-way crosstabulations adding division or discipline to the gender, age, race, and admission status variables were run. These detailed data have been distributed as separate, supplementary reports.

Summary

This report has examined course pass rates by several demographic descriptors available on the student information system, in addition to the division and discipline analyses. Subject areas and student subgroups with pass rates substantially different from the college average have been identified. variables that impact on student course success were not available on the database used to generate this analysis. educational experiences, socio-economic background, employment demands, individual motivation and study habits, family responsibilities -- these and other variables plausibly related to course success were not available. As the college xpands its efforts to assess student achievement, it may need to expand its database of entering student characteristics to include new data elements, such as high school courses taken, grade point average, and class rank. The college's Task Force on Institutional Assessment has stated that "to better evaluate student achievement, we need to know more about students when they first enter the college." While counselors and advisors often obtain

Δ

and use such information, it needs to be ertered on a student record file so it will be available for subsequent, systematic analyses.

On average, seven out of ten students enrolled in a course at PGCC complete it with a passing grade. Given the college's open admissions policy, and the little we know about the pass rates at other comparable institutions, this seems a reasonable figure. Two findings from this analysis warrant further comment. As a group, black students, particularly those new to college, young, and male, are most at risk of not completing their courses. In response, the college has developed several support mechanisms, including the state-funded Black Student Retention Initial evaluation found that students in this mentoring program achieved greater academic success than other first-time, full-time, degree-seeking black students. suggests, but does not conclusively establish, that the mentoring program was having a positive impact. (See OIRA Report PE89-1, Assessment of the Black Student Retention Program in Fall 1988, for details.) The other finding deserving comment was the continued documentation of the poor mathematics ability of PGCC Mathematics, and courses that require strong math skills such as chemistry, have consistently had the lowest course pass rates. Half of the students entering PGCC directly after high school require remediation. The trend in math scores achieved by County students taking the Scholastic Aptitude Test administered by the College Board reinforces the impression of declining math skills. About half (49.3 percent in 1988) of Prince George's County public high school seniors take the SAT; while state and national math scores have increased since the early 1980s, the mean score for County seniors has declined:

Mean Scores, SAT Mathematics, 1981-88

	1981	<u>19 8</u>	Change
Prince George's (public)	44 6	429	-17
Maryland	4 61	475	+14
United States	4 66	476	+10

Black students had lower average SAT-math (and verbal) scores than whites at every County public high school. The findings from aptitude tests taken by high school seniors appear to be reflected in achievement in coursework at PGCC.
